

UNLOCK NATURE NATURE LIBÉRÉE

UNLOCK NATURE: NATURE LIBÉRÉE is a digital citizen science project that is open to everyone in Mauritius. It explores how recent events such as Covid-19 and the Wakashio Oil Spill have affected natural landscapes and asks, have these changes been positive or negative? To achieve this, two free easy to use mobile phone applications and an online survey are being used to capture as many people's photos and thoughts as possible. Rate My View and the Mauritius Coastal Impact Survey are for individuals to use. For Landscape Connect we are encouraging use by families as well as individuals.

RATE MY VIEW

Rate my view is an app that is free to download and allows you to share pictures taken on your smartphone or tablet. Visit your local natural places and use the Rate My View app. Then use the website to see the views near you that other people in Mauritius have rated.

Download www.ratemyview.co.uk to get the app for free!

LANDSCAPE CONNECT

Landscape Connect is an app that is free to download to your Android smartphone or tablet. Share your concerns, thoughts and views about your favourite local places. Please help us by visiting a natural place, taking a photo, and answering the short questions using Landscape Connect.

Access document: [Landscape Connect - How to use the mobile app.](#)

MAURITIUS COASTAL IMPACT SURVEY

The Mauritius Coastal Impact Survey captures your views about the threats and impacts on your local environment in Mauritius and what should be done to help conserve these natural places. We are particularly interested in the effects of the oil spill, and your views on mangrove management.

Access the survey here:

<https://plymouth.onlinesurveys.ac.uk/mauritius-coastal-impact-study>

Password: mangroves&oil

Your data will be used to work towards improving the environment of Mauritius by Reef Conservation through their conservation projects Voluntary Marine Conservation Areas and SOS Mangroves. www.reefconservation.mu

For information and ongoing results go to their Facebook page: www.facebook.com/reefconservationmu

This is a locally led international collaborative project.
